

Pooled Biological Specimen Collection: External Quality Control and Regional Illegal Substance Detection Statistics

Sergey Savchuk, dr. sci. co-chairman ACTFCAS

Yerevan September 2023

KEY QUESTIONS OF CHEMICAL-TOXICOLOGICAL STUDIES

The first point. Collecting of statistical data and preparing of reports about situation with presence and consumption drugs and other psychoactive substances in illegal market is one of the main goal of forensic and toxicological laboratories. Sometimes the quality of this work depends of presence of good operating equipment, upgradeable methods and laboratory staff skills. As a result we can get a wrong results with drugs consumption particularly for big countries, like as Russia.

The next point. For improving of reliability of results of finding of novel psychoactive substances it could be interesting to share pooled positive urine samples collecting (during one or two month) in toxicology and forensic labs and current screening methods for correct analysis of this samples.

Equipment unification

Common Methods and MS Libraries

Collection of mixed urine samples in different regions

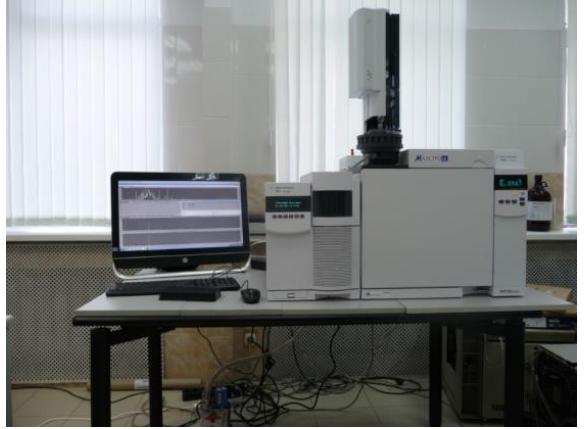

Exchange of mixed samples and screening methods

Interlaboratory testing using mixed and spike samples

Improving the methodological base

Improving the regulatory framework

Forensic and toxicology lab equipment in Russia

1999-2018
More than 200

GC-MS Agilent 5973-75-77

2015-2018
More than 10

LC-MS/MS Agilent 6420-6460

2015-2019
More than 10

LC-MS/MS Toxtyper Bruker

2019-2021 гг.
More than 17

LC-MS/MS Shimadzu 8040-8050

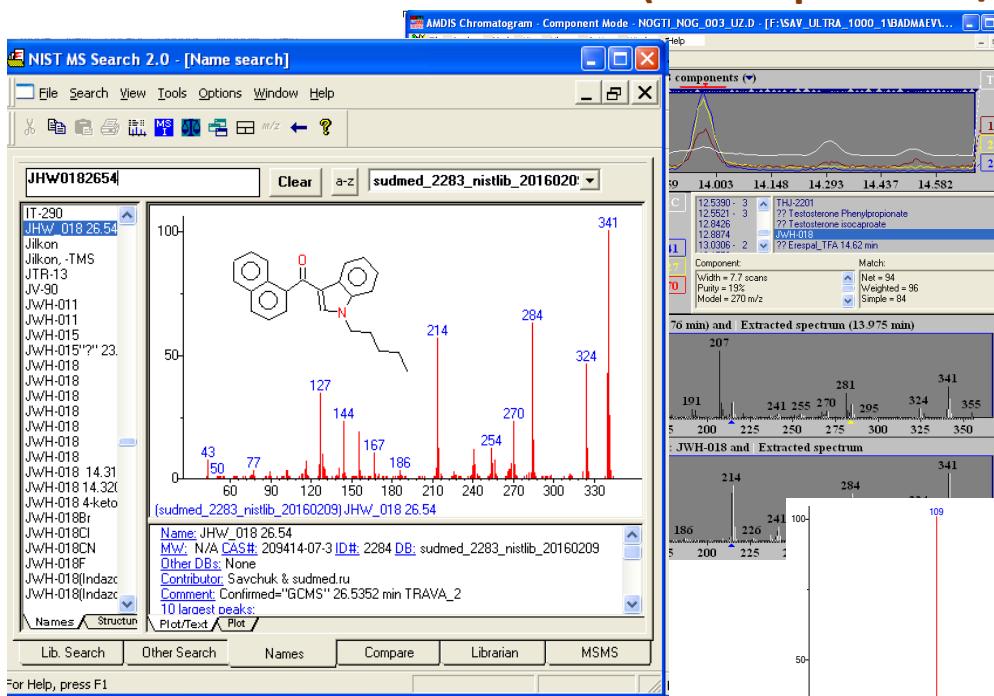

Unification of equipment - the first step for the creation of multiple methods of analysis

Creation of common GC-MS libraries based on AMDIS and libraries for LC MS/MS - the second step for the creation of common methods of analysis

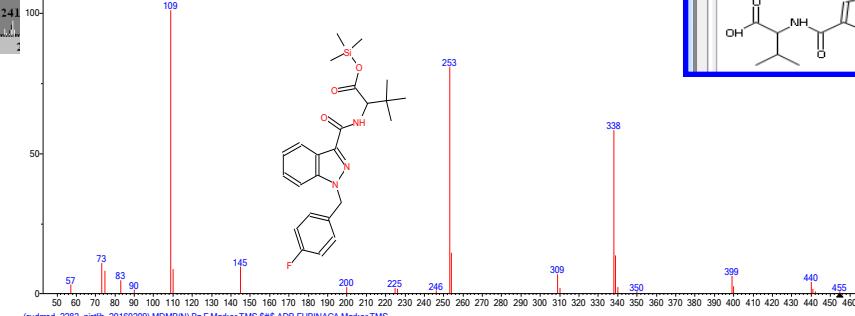

MS NIST– AMDIS LIBRARY for GC-MS

FREE MS LIB “SUDMED MS” (2371 spectra 24/10/23)

2013 First detection of JWH-018 in nail sections
Moscow NSC Narcology 2013 г.

MS/MS LIBRARIES for LC-MS (QQQ, ION TRAP, Q-TOF)

The screenshot shows the Bruker LibraryEditor software interface. The title bar reads "Compass LibraryEditor - [Cann_Metab.mnlb]". The menu bar includes File, Edit, Compound, Spectrum, View, Window, and Help. The toolbar contains icons for opening files, saving, zooming, and other functions. The main window displays a search result for "Cann_Metab.mnlb". The results table has columns for Compound, Nominal mass, Monoiso. mass, Average mass, Comment, Mass Spectra, and UV Spectra. The "Average mass" row for the result is highlighted in red and contains the text "BRUKER". The "Comment" column for the result also contains "BRUKER". The "Mass Spectra" tab is selected, showing a spectrum plot with the x-axis labeled "m/z" and the y-axis labeled "Abund.". The "UV Spectra" tab is also visible. On the right side of the screen, there are two text boxes: one for "AB-FPI-ACA-1" and another for "C₁₉H₂₄N₂". A sidebar on the right is titled "Acquisition Parameters" and lists "Instrument type: FTMS", "MS/MS stage: 2", "Trap drive: 0", "Collision gas: 0", "Reagent ion: 0", and "Collision energy [eV]: 0". Below the search results, there is a "Structure:" section containing a chemical structure of a substituted cyclohexene derivative with a carboxylic acid group.

The screenshot shows the MassHunter PCDL Manager interface. At the top, there's a menu bar with File, Edit, View, PCDL, Links, Help, and a toolbar with icons for Find Compounds, Single Search, Batch Search, Batch Summary, and Edit Compounds. The main search area has fields for Mass, Mass tolerance (set to 10.0), and various identifiers like CAS, IUPAC, and FDU-PB22-M HY (HOD). Below this is a Retention time section with a dropdown and a 'Require' checkbox. A large red watermark 'AGILENT' is overlaid across the search area. The bottom part of the window shows a list of parameters with values set to 'No Setting'. A large red watermark 'SHIMADZU' is overlaid across the parameter list. The status bar at the bottom displays the text 'Run Analysis (System Administrator) - [MS Library Editor - CANN_METAB_LCMSMS.lib]'.

Hit#	Compound Name	Mol.Wt.	Formula
3	AB-PINACA-M (HOOC-)	331	C18H25N3O3
4	AB-PINACA-M (HOOC-) GU	507	C24H33N3O9
5	AB-PINACA-M (HOOC-HO-) isomer-1	347	C18H25N3O4
6	AB-PINACA-M (HOOC-HO-) isomer-2	347	C18H25N3O4
7	AB-PINACA-M (HOOC-oxo-)	345	C18H23N3O4
8	AB-PINACA-M (HOOC-oxo-) GU	521	C24H31N3O10
9	AB-PINACA-M (dHOOC-)	361	C18H23N3O5

September 2014 mass poisoning with a new psychoactive substance. First results of detection of MDMB(N)-Bz-F metabolite/marker in urine.

Collection of samples for professional testing of laboratories (Nizhnevartovsk lab collection in the pictures) Also laboratories from Moscow, St. Petersburg, Noyabrsk, Surgut are taking part in the collecting of samples

КОЛЛЕКЦИЯ
образцов мочи человека с
метаболитами/маркерами целевых
соединений

Description of the collection of samples for professional testing laboratories (Nizhnevartovsk toxicology lab)

Коллекция образцов мочи человека с «метчиками» целевых соединений

Content of biological samples for professional testing of laboratories 2015-2022

The number of laboratories which took part in ten rounds of interlaboratory exercises during the period 2015-2022 were from 18 to 35 laboratories annually.

1st round 2015

PT-4-urine (2015/1): MDPV, PB-22, PB-FUB22, AB-PINACA, 5F-AB-PINACA, AB-FUBINACA .

PT-5-urine (2015/1): α-PVP, amphetamine, cocaine, methadone, codeine, morphine, diphenhydramine, doxylamine, phenobarbital, naproxen, ketoprofen, diclofenac, ibuprofen, metamizole, chloroquine, tropicamide, phenyramine, THC-COOH.

PT-6-urine (2015/1): caffeine, theobromine ("negative" sample from a person who does not consume drugs, NPS and nicotine).

2nd round 2015

PT-8-urine (2015/2): α-PVP, amphetamine, desomorphine, codeine, morphine, PB-22F, AB-CHMINACA, XLR11, THC-COOH, acetaminophen, tropicamide, naproxene, carbamazepine.

PT-9-urine (2015/2): α-PVP, MDPV, PB-22F, AB-CHMINACA, XLR11, MDMB(N)-Bz-F, ADB-FUBINACA, AB-PINACA, acetaminophen.

PT-11-urine (2015/2): caffeine, theobromine.

PT_5v_hair (2015/2): MDPV, XLR11 (thermal isomer, metabolites/markers).

3rd round 2016

PT-12-urine (2016/1): α-PVP, THC-COOH, metabolites/markers: 5F-AB-PINACA, AB-CHMINACA, MDMB(N)-2201, MDMB(N)-Bz-F.

PT-13-urine (2016/1): α-PVP, amphetamine, MDA, codeine, morphine, thebaine, AB-CHMINACA-M(COOH), phenobarbital.

PT-14-urine (2016/1): caffeine, theobromine.

4th round 2016

PT-16-urine (2016/2): morphine, gamma-amino-beta-phenylbutyric acid.

PT-17-urine (2016/2): α-PVP, metabolites/markers: AB-CHMINACA, MDMB(N)-2201, ADB-FUBINACA, AB-PINACA, 5F-AB-PINACA; diphenhydramine.

PT-18-urine (2016/2): caffeine, theobromine, carphedon.

5th round 2017

PT-19-urine (2017) spiked sample: caffeine, theobromine, morphine, **GHB (added component)**

PT-20-urine (2017): AB-FUBINACA-M, : 5F-AB-PINACA-M, α-PVP, THC-COOH, MDMB(N)-2201-M,

PT-21-urine (2017): caffeine, theobromine.

6th round 2018

PT-22-urine (2018): caffeine, theobromine.

PT-23-urine (2018): ADB-FUBINACA-M, : 5F-AB-PINACA-M, α-PVP, THC-COOH, MDMB(N)-2201-M,

PT-24-urine (2018): THC-COOH, morphine, codeine, tramadol, chloropromazine, phenotropyl, chloropyramine, pheniramine, naproxen, paracetamol, diclofenac, ibuprofen, analgin, efavirenz, fluconazole, carbamazepine, gabapentin, haloperidol, thioridazine.

7 раунд 2019 г. 7th round 2019

PT-25-urine (2019/2): alfa-PVP, carbamazepine, tropicamide, phenobarbital, caffeine, gabapentin, nicotine, cotinine, paracetamol, pregabalin, Cotinine, Tramadol, Naproxen, THC-COOH, Theobromine, Metamizole, Phenibut, Cyclobenzaprine, Naphazoline

PT-26-urine (2019/2): Caffeine, Theobromine, Paracetamol

PT-27-urine (2019/2) spiked sample: Caffeine, Theobromine, Tolperisone, methanol, ethylene glycol (added components)

8 раунд 2020 г. 8th round 2020

PT-28-urine (2020) spiked sample: Caffeine, Theobromine, added components: Toluene, 1,2-dichloroethane, Glycol ester mix (brake fluid)

PT-29-urine (2020): caffeine, theobromine.

PT-30-urine (2020): alfa-PVP, Codeine, Morphine, XLR-11 metabolites, AB-Chminaca-M, Dicycloverine, THC-COOH, Pregabalin, Nicotine, Caffeine, MDVP, Naproxen, Tropicamide, Analgin, Paracetamol, Amitriptyline, Cotinine, Memantine, Thebaine, Theobromine, Carbamazepine, MDMB(N)BZ-F_M(-COOH), Phenobarbital, Neopin, alfa-PHP, Ethanol, Acetaminophen, Ambroxol, Mebeverine, Amitriptyline, AB-Chminaca_M(COOH), AB-FUBINACA_M(COOH), Benzoylecgonine, Baclofen.

9 раунд 2021 г. 9th round 2021

PT-31-urine (2021): Analgin, metabolites, alfa-PVP, Pregabalin, Pregabaline, Nicotine, Cotinine, Bisoprolol, Phenobarbital, Doxylamine, Caffeine, Diphenhydramine, Theobromine Baclofen, Betoxalol, 5F-AB-Pinaca metabolites, THC THC-COOH AB-CHMINACA-M (HOOC-), AB-CHMINACA-M (HOOC - HO-), MDMB(N)BZ-F-M, Chlorpheniramine, Ethanol, Ethylglucuronide Paracetamol, MDMB(N)-2201-M, Aminophenazole, Niketamide, AB-Pinaca-M(COOH), MDPV, XLR-11 metabolites, Naproxen, Furosemide.

PT-32-urine (2021): caffeine, theobromine.

PT-33-urine (2021): Methadone, EDDP, Methadone, Naphazoline, Analgin, MDMA, Abacavir, Mephedrone, Linezolide, Pregabaline, Nicotine, Ibuprofen, Paracetamol, Ketoprofen, Atazanavir, Benzoylecgonine , Ampheamine, Methamphetamine, 4-Fluoroamphetamine, Phenibut, alfa-PVP metabolites, THC-COOH Phenobarbital Caffeine, Theobromine, Pheniramine/

10 раунд 2022 г. 10th round 2022

PT-34-urine (2022): caffeine, theobromine, nicotine, paracetamol.

PT-35-urine (2022): Valproic acid Amphetamine Mexidol Nicotine Cotinine Gabapentin Methamphetamine Pregabalin MDMA Phenibut a-PVP Acetaminophen Pheniramine Caffeine Diphenhydramine Theobromine Tramadol Ketonolac Methadone Naproxen Fluconazole Diclofenac Tetrahydrocannabinolic acid Metamizole Tropicamide Ambroxol Benzoylecgonine Bisoprolol Memantine Furosemide Mephedrone Carbamazepine Traces Citalopram Quinine Ofloxacin Trimethoprim Drotaverine

PT-36-urine (2022): Valproic acid Mexidol Nicotine Pregabalin Acetaminophen Gabapentin Cotinine Lidocaine a-PVP and its metabolites Promedol(trimeperidine) Doxylamine Pheniramine Caffeine Theobromine Tramadol and its metabolites Phenobarbital Methadone and its metabolites Morphine Morphine-6-glucuronide Amitriptyline Tetrahydrocannabinolic acid Tropicamide Levomepromazine Metoclopramide Enalapril Bisoprolol Baclofen MDMA Atropine Benzoylecgonine Ketoprofen Ranitidine Metformin Sulpiride Naloxone Ofloxacin Rocuronium Lazortan Piracetam Pentoxifylline Ketonolac Thioridazine Carbamazepine Clozapine Codeine

The results of the analysis of the control sample PT-35 (2022), confirmed by the high resolution mass spectrometry LC-QTOF

ОТЧЕТ ТОКСЛАБ 2016 РАУНД 2

01.05.16

Анализ протоколов участников 2-го
раунда МСИ Токслаб 2016 года

В данном документе представлены описания проб а также
результаты анализа по проведенным исследованиям в
химико-токсикологических лабораториях регионов
Российской Федерации

The example of summary report of the
2016/2 round of the external quality assurance

Common Problem 1: False Positive Results on Negative Samples

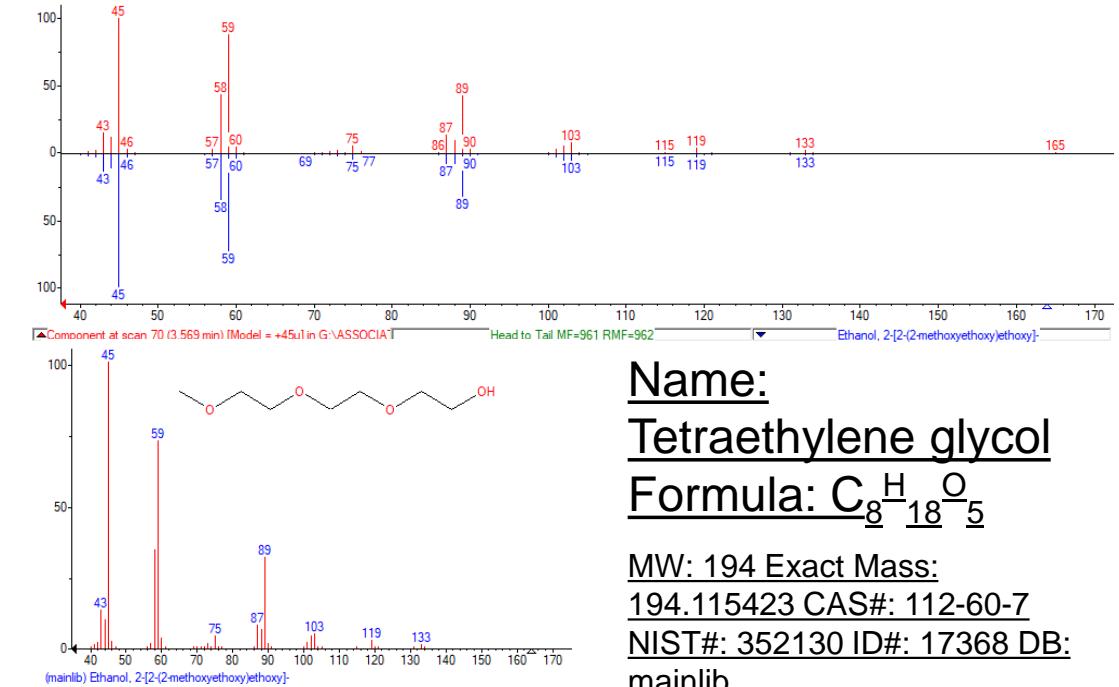

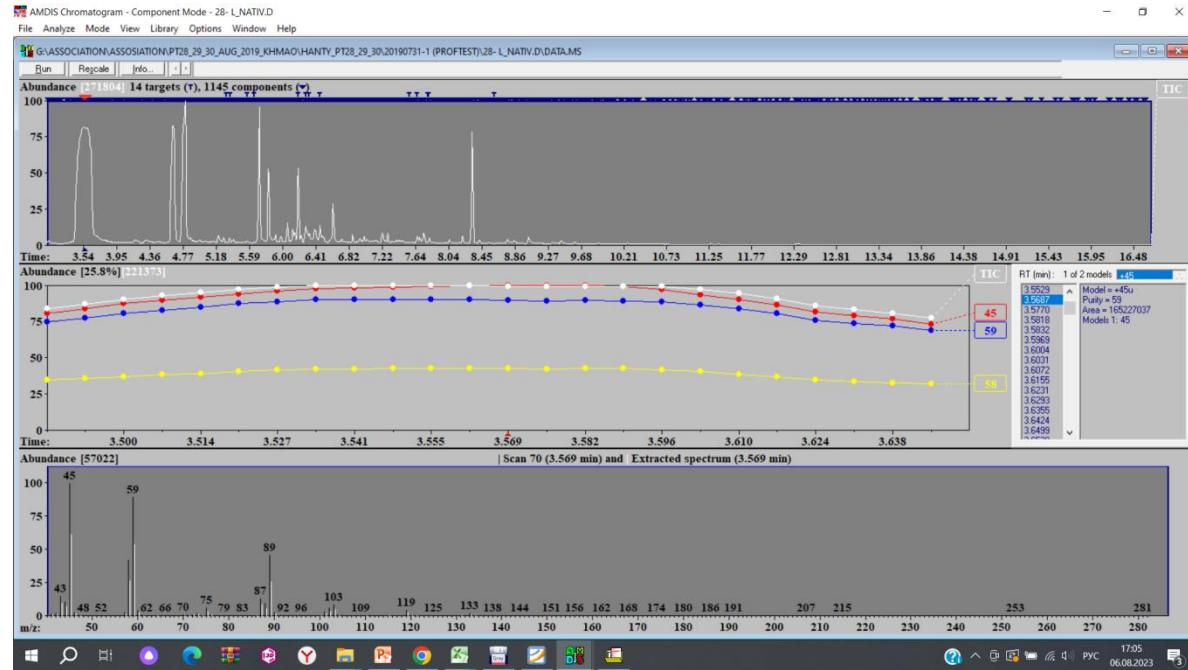

PT-21-urine (BLANK) 2017:caffeine, theobromine

Обнаружено с	Исходное	Позиция	2017E001 Астрахань	2017E002 Тула №1	2017E003 Рязань СХО ГБУ РО Бюро СМЭ	2017E004 СМЭ	2017E005 Нижневартовск	2017E006 ХТЛ	2017E007 Ноябрьск	2017E008 СМЭ	2017E009 Курган	2017E010 СМЭ

Common problem 2: Not Detecting of rare toxicants

Urine spike sample with added automotive brake fluid, simulation of a real case fatal poisoning

PT-28-urine (2020) spiked sample: Caffeine, Theobromine,
added components: Toluene, 1,2-dichloroethane, **Glycol ester mix (brake fluid)**

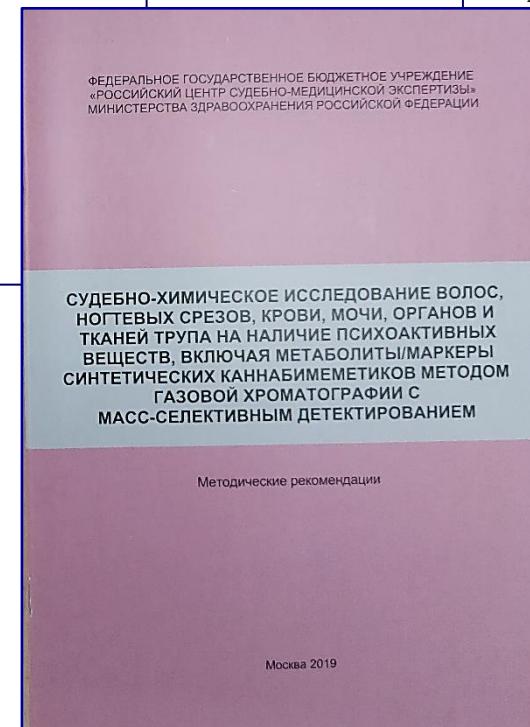

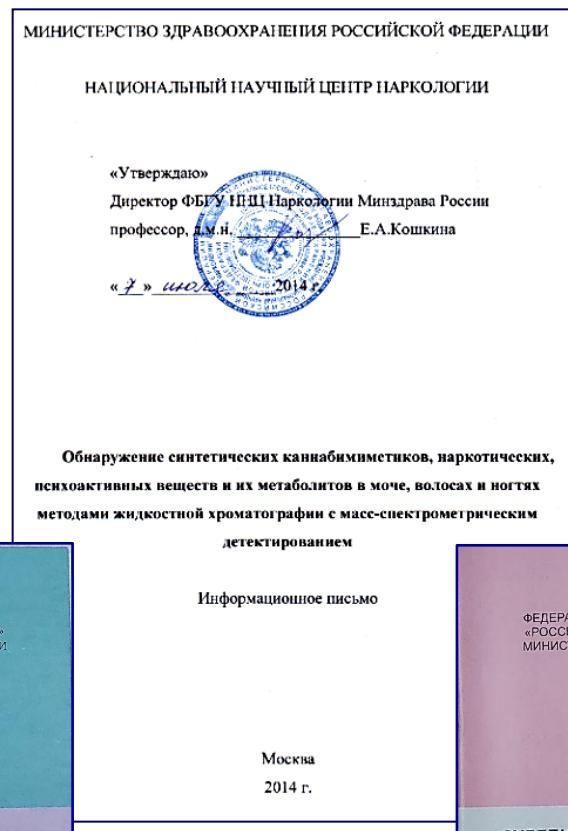

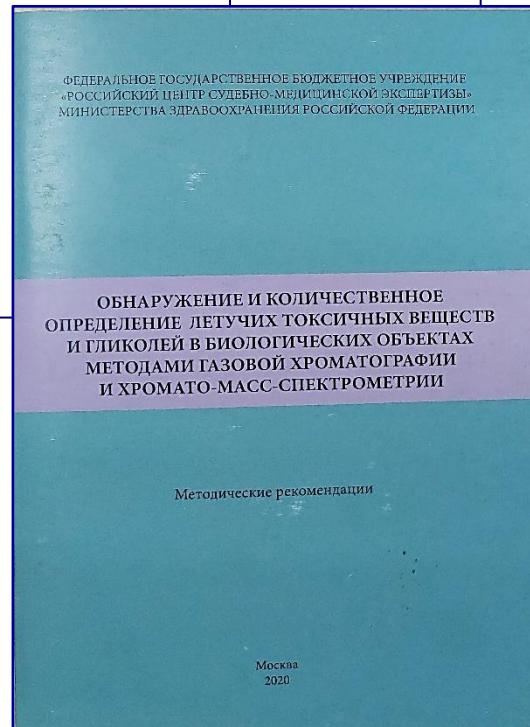

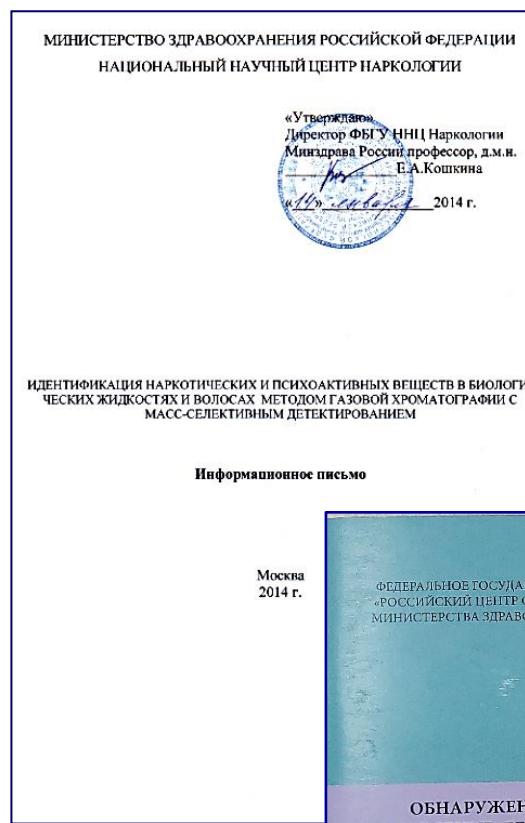

Name: Tetraethylene glycol
Formula: C₈H₁₈O₅

MW: 194 Exact Mass:
194.115423 CAS#: 112-60-7
NIST#: 352130 ID#: 17368 DB:
mainlib

Most of participated labs had a problem with identifying of brake fluid in the spike sample

To solve this problem, methodological recommendations were prepared in 2021 by Anastasia Yudina , Penza Forensic Bureau: **"Determination of glycol ethers by gas chromatography-mass spectrometry and high performance liquid chromatography tandem mass spectrometry in a forensic chemical examination of the internal organs, blood and urine of a corpse"**

2016/2/BS-4	Morphine (Total)	+	right	
2016/2/BS-5	3,4-Methylenedioxymethamphetamine (MDMA)	+	right	
2016/2/BS-6	4-Bromo-2,5-dimethoxyphenethylamine (2C-B)	+	right	

Test Samples Comments on samples

2016/2/BS-1 To prepare BS-1, urine was spiked with an aqueous solution of morphine sulphate (1138ng base/ml). The spiked urine was dispensed in 50ml aliquots and lyophilised.

2016/2/BS-2 To prepare BS-2, urine was spiked with aqueous solutions of morphine sulphate (1138ng base/ml) and benzoylgeanine (690ng base/ml) and a methanol solution of methylecgonine (350ng base/ml). The spiked urine was dispensed in 50ml aliquots and lyophilised.

2016/2/BS-3 To prepare BS-3, urine was spiked with an aqueous solution of MDMA hydrochloride (1955ng base/ml). The spiked urine was dispensed in 50ml aliquots and lyophilised.

2016/2/BS-4 To prepare BS-4, urine was spiked with a methanol solution of 2-CB hydrochloride (1724ng base/ml). The spiked urine was dispensed in 50ml aliquots and lyophilised.

EXPLANATORY NOTE:
Test samples: the number of the sample tested
+ = positive, - = negative, 0 = results reported by your laboratory
+* = positive, analyte is identified
-** = negative, analyte is not identified
ANP = analysis not performed
Comments: + if positive, - if negative considering the main analyses in the test samples
right = analysis found or false positive

CERTIFICATE OF CONFORMITY OF THE LABORATORY FROM UNODC

31 May, 2021

Dear Participant,

The continuous participation of laboratories in the UNODC International Collaborative Exercises (ICE) programme is a reflection of their consideration of the importance, that laboratory quality assurance and continuous monitoring of performance plays in assuring the quality and reliability of test results. In particular, emphasizing that the quality and reliability of those results are a matter of safeguarding human rights and fundamental freedoms and ensuring public safety and effective law enforcement.

UNODC, in consultation with its International Panel of Forensic Experts, has decided to award a certificate of participation to your laboratory for its successful participation in four successive rounds of the ICE programme (from 2018/2 to 2020/1).

UNODC would like to acknowledge and express its gratitude to your laboratory for your continued collaboration, your efforts to ensure that quality forensic services are available in your countries' efforts to address the issue of drugs, and valuable contribution to the development and success of the programme.
